

BowTieXP® ECE

Enterprise Collaboration Edition

BowTieXP® loves to work with Microsoft® SharePoint®!

BowTieXP® ECE - Enterprise Risk Management for your Microsoft® SharePoint® Intranet

WHAT IS BOWTIEXP®?

BowTieXP® is a risk analysis software tool. It visualises any risk you are dealing with in just one, easy to understand picture. The diagram is shaped like a bow-tie, creating a clear differentiation between proactive and reactive risk management. The power of a BowTieXP diagram is that it shows you “A Summary Of Several Plausible Risk Scenarios, in a single picture.”. In short, it provides a simple, visual explanation of a risk that would be much more difficult to explain otherwise.

Complete & Light Weight Enterprise Risk Management

- BowTieXP® Enterprise Collaboration Edition is everything you need from an Enterprise Risk Management solution, but without the weight and complexity.
- Rather than setup new servers and add yet more stuff to your IT environment, BowTieXP® uses the Microsoft® SharePoint® software you already have.
- BowTieXP® Enterprise Collaboration Edition automatically shows and summarises your data from BowTieXP® when you upload a BowTieXP® file. The simplicity of SharePoint® combined with the power of BowTieXP®

Qualitative Enterprise Risk Management

- While most Enterprise Risk Management solutions tend towards quantitative information (‘meters on a dashboard’), BowTieXP® blends the quantitative with qualitative information. Of course BowTieXP® ECE can tell you exactly how many incidents of which nature have occurred, but it can also tell you exactly how this information relates to your (safety) management system.

New Enterprise Risk Management: Keeping It Simple

- BowTieXP® Enterprise Collaboration Edition provides you a growth path, allowing you to get started with Enterprise Risk Management today.
- Keeping it simple is at the core of BowTieXP® ECE. This philosophy has made BowTieXP® the most popular qualitative risk management tool in Global Fortune 500 companies.

INNOVATIVE FEATURES

BowTieXP® One-Click Visualisation

BowTieXP features a highly interactive diagram. BowTieXP® ECE provides one-click access to the BowTieXP® interactive diagram from SharePoint®!

BowTieXP® ECE Change Management

BowTieXP® ECE provides advanced change management functions that allow you to compare risk assessments. Even if changes have not been logged by the author, the clever solution provided by BowTieXP® ECE helps to prevent changes from going unnoticed.

Integrated SharePoint® Browser

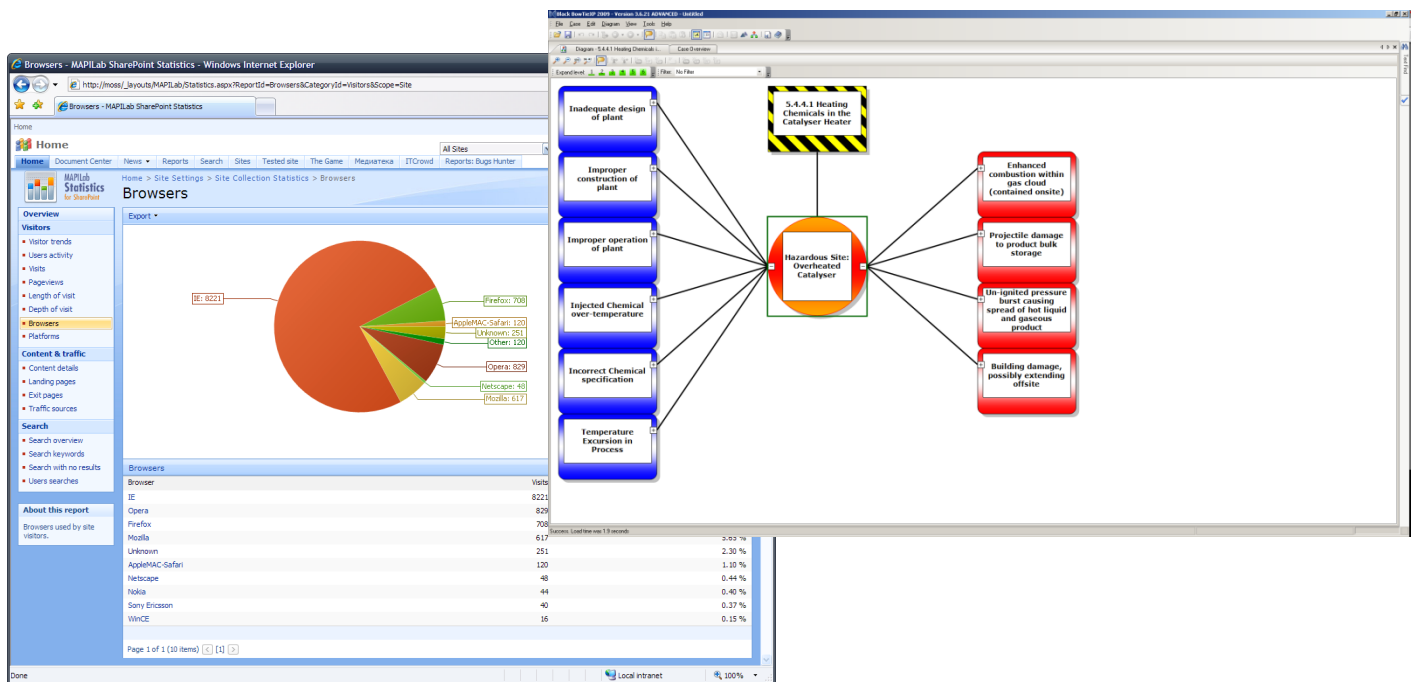

BowTieXP® Enterprise Collaboration Edition understands Microsoft® SharePoint® inside out. Even its file explorer can go directly to Microsoft SharePoint® and understand the setup of your organization.

Best Of Both Worlds: the WinWeb

The Web is great for sharing information but still not ideal for creative and visual work. That is why BowTieXP® blends the best of the web, information sharing in one place, with a rich user interface that works ‘smooth as butter’.

BowTieXP® ECE Is Completely Open

Unlike most Enterprise Risk Management solutions, BowTieXP® ECE provides built-in interfaces that provide full and easy access to all risk data. BowTieXP® Solution providers like Global Risk Communication can extend ECE in any way you want.

Work Together Wherever You Are – The Visual Way

- **Helps Meet Regulatory Requirements** – BowTieXP® security settings, storage policies, auditing policies, and expiration actions for risk assessments and documents are easily configurable in accordance with virtually all compliance regulations across the globe.
- **BowTieXP® Risk Assessment & Management System integrated** – BowTieXP® Enterprise Collaboration Edition turns SharePoint® into a unified location where both your risk assessments and your (safety) management system and all its documentation can be found.
- **Automatic Versioning** – Every time someone updates the risk assessment, BowTieXP® ECE can track it by creating a new version. Even better, BowTieXP® can tell you exactly what has changed between versions.
- **Custom Approval Processes** – Risk Assessments need to be verified and approved. The custom approval processes supported by BowTieXP® ECE allow your organisation to set the approval process up to reflect your organizational standards, with the same ease offered by SharePoint®.
- **Work Freely** – BowTieXP® Enterprise Collaboration Edition has a nonblocking design: users can work freely with risk assessments and pose any relevant 'what if' question to see how the risk changes. Brainstorm freely and safely, sandboxed from the centrally approved risk assessments.

ENTERPRISE COLLABORATION:

- One location for all risk assessments
- Keep track of changes automatically
- Secure sharing of risk assessments
- Social tools integrated: Wiki & co
- Helps Comply with regulations
- Enjoyable experience for participants
