Risk Analysis & Incident Investigation Course

Introduction Course

Governors Risk Management and KBA Training Center Pte Ltd invite you to attend the upcoming Risk Analysis & Incident Investigation Course in Singapore. In this four day course you will become familiar with the methods and their supporting software tools of the complete and integrated Governors Risk Management package.

By means of practical case studies and real life examples from the Marine industry you will learn to apply the methods in your own work environment. Using workshops and interactive sessions the trainers will make sure that you will go home a practiced user of both the methods and software tools. The case studies and examples will come from the Marine and Diving Industry, as well as general construction industry case studies but the course will be accessible for other industries.

In this course you will learn:

- How to do Bowtie Qualitative Risk Analysis Methodology
- How to Create Bowtie Risk Analysis Diagrams
- How to Link your Risk Analysis to the Management System
- What the Software can do to support your Risk Analysis
- How to do Incident Investigation with the TOP-SET® method
- How to do thorough Incident Analysis with the Tripod method
- What the Software can do to support your Incident Investigation
- How to interconnect Risk and Incident Analysis

Bring your laptop for participation!

10% Software discount
on all products only for participants of the course

Risk Analysis & Incident Investigation Course

Choose your Modules

A 4 day course with 4 distinct modules that can be followed separately. You will learn how to do both proactive risk analysis and reactive incident investigation and analysis. The course is full of relevant examples and exercises.

You are free to attend the whole course but you can also subscribe yourself to the modules of your preference. The course is structured so that each individual module can be followed separately.

Day 1 Module: Risk Analysis using the Bowtie method

- Σ The Bowtie method in Risk Management
- Σ Extensive Bowtie theory
- Σ Interactive Bowtie workshops
- Σ Best practices

Day 2 Module: BowTieXP software training

- Σ Step by Step diagram building
- Σ Linking to the Management System
- Σ Demonstrations and Hands on Learning
- Σ Reports and Outputs

Day 3 Module: TOPSET Incident Investigation and Root Cause

- Σ Structured Investigation Planning and Data Gathering
- Σ Interactive Investigation workshops
- Σ Root Cause Analysis using Storyboarding
- Σ Hands-on software experience: Investigator 3

Day 4 Module: Tripod Beta Incident Analysis

- Σ Extensive Tripod Beta theory
- Σ Step by Step diagram building
- Σ Interactive Tripod Beta workshops
- Σ Hands-on software experience: Investigator 3
